

Kenmore Schools Summer Day Camp

Dear Parents and/or Guardians,

Your child's daily medications should be given at home prior to summer day camp. The exception is that New York State law allows children with **respiratory (breathing) conditions, allergies, and/or diabetes the right to independently carry and use their inhaled respiratory rescue medications; epinephrine auto-injectors; and insulin, glucagon, and related diabetes supplies** if the following is provided:

1. Written permission from the parent/guardian; and
2. Written provider order with an attestation stating both the diagnosis, and that the child has demonstrated they can effectively administer the medication(s).

Independent carry and use of medications means that your child will take their own medicine without any help. Summer Day Camp Staff support would be provided only in an emergency.

If you want your child to independently carry and use a medication for a condition listed above during the Summer Day Camp, you will need to ask their health care provider to put in writing (attest), that they have watched your child use the medication correctly.

If this information is not on the form your provider uses, you will need to have them provide it. We have a sample form for the provider to use if needed.
