

USE OF OXIVIR WIPES

DISINFECTING BETWEEN PERIODS AT SECONDARY

ALL SECONDARY CLASSROOMS HAVE BEEN PROVIDED WITH OXIVIR WIPES

OXIVIR TB WIPES are disinfectant wipes that use hydrogen peroxide as the main ingredient. These . wipes have a one minute kill time and are effective against COVID-19.

TEACHERS WILL WIPE DOWN ALL DESKS AND HIGH TOUCH AREAS BETWEEN STUDENTS/PERIODS

Desk tops, fronts and high-touch areas on student chairs should be wiped between students/periods.

TEACHERS WILL NEED TO ALLOW TIME FOR THESE PROCEDURES

Class periods should conclude after 35 minutes to allow time for wiping down desks. Students may remain in the classroom while desks are being wiped, however students may be asked to stand beside desks or in a line, maintaining social distancing. Teachers may wish to mark indicators on the floor to assist with this procedure. The teacher will use these 3- 5 minutes to wipe down desks before students are dismissed. The teacher may need to continue this process during the student transition time, if necessary. .

GLOVES MAY BE WORN BY TEACHERS USING THE WIPES

Teachers may be provided with gloves for their use upon request. While there are no immediate risks to skin contact, regular use of the wipes may prove irritating to those with sensitive skin, thus gloves may be requested.

ONE WIPE SHOULD BE USED FOR TWO DESKS

Given that the wipes dry quickly after application, one wipe should be used for two desks.. These guidelines will also help the district predict and control inventory. When wiping desks, an "S" pattern is recommended.

CLEANING POLYCARBONATE BETWEEN STUDENTS

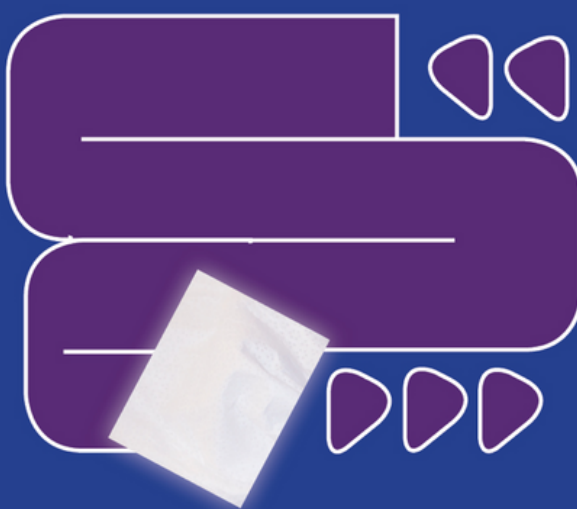

Polycarbonate shields should be wiped down between students/periods. One wipe may be used for two polycarbonate shields. When wiping polycarbonate shields, an "S" pattern is recommended.

OXIVIR WIPES

BASICS

Remove one wipe from canister. Close Lid

Work from clean to dirty in an S shape. Allow the surface to air dry

Dispose used wipes into a suitable waste bin
